

TECH KNIGHTS

INFORMATION SCIENCE & ENGINEERING

Shrilya Educational Trust (R), Bheemasamudra

GM INSTITUTE OF TECHNOLOGY

The Department of Information Science & Engineering started in the year 2001 with an annual intake of 60 and provides an outstanding learning environment complimented by excellence in teaching. Having established with a firm footing in the field of technical education, the department has grown by leaps and bounds over last two decades and the spirit is still continuing in every possible way to tailor, shape and build the finest technocrats.

The Department is equipped with all necessary infrastructure and laboratory facilities. Keeping in view of the vision of the institute, the department of ISE is working to achieve excellence in various aspects such as: students' performance, effective teacher-student relationship, imparting quality education to students, motivating faculty and students towards research and imbibing best human qualities in students.

The VTU recognised Research centre has been established in the year 2017, by the department to provide an opportunity for research aspirants. The department is imparting effective the Outcome Based Education(OBE) as per NBA norms. An effective Mentoring scheme carried out by Alumni of the department to guide their juniors regarding career guidance, Entrepreneurship skill and recent IT trends Customised and Fast track training for students from IT Trainers and free lancers to excel in app development and to evolve with applications of their creative ideas. GM NextGen Innovation Centre is established in the Department from the year 2019 to offer students with full-fledged training and opportunities for students to come up with ideas and projects using IoT. Internships and Industry visits at reputed organisations for exposing students to practical knowledge in order to motivate and strengthen their vision and skills.

Vision

To evolve as an Excellent Technological Education Centre of Information Science and Engineering to create competitive professional engineers for the advancement of society.

Mission

M1: To provide application specific training & practical experience for developing quality engineers in Information Science & Engineering.

M2: To Inculcate Creative Skills in students to become competent in the field of Information Science & Engineering.

M3: To Inculcate Professional, Social and Ethical values in students to perform better in diverse environment.

Program Educational Objectives

PEO1: To develop graduates who are proficient to solve wide range of computing related problems.

PEO2: To prepare graduates who have the necessary skills required for higher education & Entrepreneurship.

PEO3: To prepare graduates who have the ability to engage in lifelong learning.

Program Specific Outcomes

Graduates of Information Science & Engineering are:

1. Capable to design, develop & test the IT Solutions in real time.
2. Competent to apply knowledge to manage & monitor IT

Message from Principal's Desk

We at GM Institute of Technology are committed to build the future of the youth as well as youth for the future. The Institute is established to nurture, and shape technical professionals and leaders to create an inclusive and sustainable society by inculcating all round skills to the youth. In the world, governed by technology, this institute has put its sincere efforts to keep pace with the rising demands of technology.

The Department of Information Science and Engineering has taken birth along with the institution in the academic year 2001- 2002 and constantly enriching positive

support for co-curricular activities and campus placement activities which equips the students to manage and lead the varied opportunities and Challenges of the society. The Department Magazine Tech Knights 2021-22 reflects all the outcome based happenings of the ISE department of the present Academic Year.

Dr. Y. Vijaya Kumar
Principal

Message from HOD's Desk

Dear Readers,

Greetings from ISE-GMIT....I am happy to share and wish to bring to your kind notice few developments in the department. The very objective from the department for the academic year watch to bring a culture of self learning and to expose the students to the competition in the world. Many innovative thoughts have been executed to benefit the students. Placement is supported by the special Aptitude training by Mr Sharath, Copper Age.

The most seeking initiative in the department; Sukalpa-Tech fest has been organized and conducted in a grand manner.

The program has record enrolment and overwhelmed response from the students of different parts of the state. Sukalpa has set a new standard in the department and at the institute level by its way of conduction and participants flourish the real flavor of technical events in all segments i.e., start from coding, Presentations, Marketing, Design thinking & Entrepreneur skill check. Industry connectivity is emphasized by conducting much Internship with Sookshmas, Siemens, BPA Labs and APCOG Pvt Ltd. Also an International Hackathon was conducted by the BPA Labs has become the most appreciated both by the organizers and Participants.. It's my pleasure to greet and thank all the editorial committee members for their effort in bringing out this edition successfully.

We all have something that makes us feel alive, a passionate pursuit that adds a little extra meaning to life, an activity that gives us a sense of fulfilment of purpose. We must Chase down our passion like it's the last bus of the night. We can do anything as long as we have the passion, drive, focus, and the support.

I have the passion of presenting the things beautifully & in organized pattern. With the overwhelming motivation and guidance of the Department Head, Principal and the strong support of my beloved student committee members, I am very happy to present the Annual Magazine "Tech-Knights" which provides the aroma of departments progress **towards success** and quality enhancements.

I extend the hearty gratitude and special thanks to Mr. Prakash T K, the technical staff of ISE for his patience and prolonged support in designing and making this magazine more presentable. With the feel of contentment, I owe my words of gratitude to everyone for their whole hearted support and wishes.

Message from Faculty Editor

Ms. Bhoomika S S
Asst. professor

“Sukalpa” - A State level Tech Fest

इयडिक्टिफ

“AN INVESTMENT IN KNOWLEDGE PAYS THE BEST INTEREST”

Sukalpa: A State level technical fest conducted on 11th and 12th of Jan 2022, where every student got an opportunity to present his/her innovative skills and talents. Sukalpa invited the participants from various Engineering colleges all over the State. This also provided an opportunity to exhibit ideas by participants on a unique and massive platform in the form of well-integrated and intriguing presentations. It successfully explored the inquisitiveness of young minds by giving their incredulous ideas a definitive direction.

Sukalpa was organized in association with ISTE and in collaboration with Sookshmas E-Learning Pvt Ltd, Bengaluru and BPA Labs Czech Republic. The event obtained the overwhelming response by around 130 teams' registration where more than 250 participants from in and around the city took part in the competitions. The event had a sparkling start with the welcome dance by final year students of ISE – A flash mob which attracted every invitee and students over there. Followed by the inaugural ceremony with the gracious presence of the chief guest Dr. Sharvani G S, Associate Professor, Department of CSE, RVCE, Bengaluru.

Sukalpa included four events of diversified expertise such as Code Heist, Anavarana, Tech Wizards and Sagacity. Code Heist: A coding competition intended to encourage students in coding and logical thinking. The event is based on simple C programming concepts.

Anavarana: A technical paper presentation in view of betterment of society and mankind. There are many ways to contribute to the society. Each step towards its advancement makes a difference.

Tech Wizards: An event in which participants come up with ideas for new applications whether web, mobile or desktop app. This event will focus on skills such as system design and product management.

Sagacity: An event is planned to gauge and reward their IQ through a series of enjoyable rounds. It just demands the presence of mind, Audio visual observations, and the basic details regarding celebrities, logos, taglines, puzzles / model building, and treasure hunts.

All the planned events were effectively conducted with hard efforts and involvement of student coordinators. The participants of other colleges heartily appreciated the conduction mannerism and the coordinators.

Faculty Development Programme

1. Dr. Neelambike S, Asst Professor of IS&E, has successfully participated in IP Awareness/Training program under “**Intellectual Property Awareness**” on may 23rd 2022 organized by Intellectual Property Office, India.

2. Amith Shekhar C, Asst Professor of IS&E, attended a Three Days Virtual Faculty Development Program on “**Data Science & Networking**” organized by the Department of Electronics and Communication Engineering, Rajeev Institute of Technology, Hassan from 25th to 27th August 2022.

3. Dr. Neelambike S, Asst Professor of IS&E, attended Two Day NAAC Sponsored State Level Seminar on “**Teaching Learning and Assessment Process as per OBE in higher Education Institutions in line with NEP 2020**” on 2nd & 3rd September 2022

4. Ms. Bhoomika S S, Asst Professor of IS&E, attended Two Day NAAC Sponsored State Level Seminar on “**Teaching Learning and Assessment Process as per OBE in higher Education Institutions in line with NEP 2020**” on 2nd and 3rd SEP 2022

Certificate by Students

AWS Cloud Beginners Certification

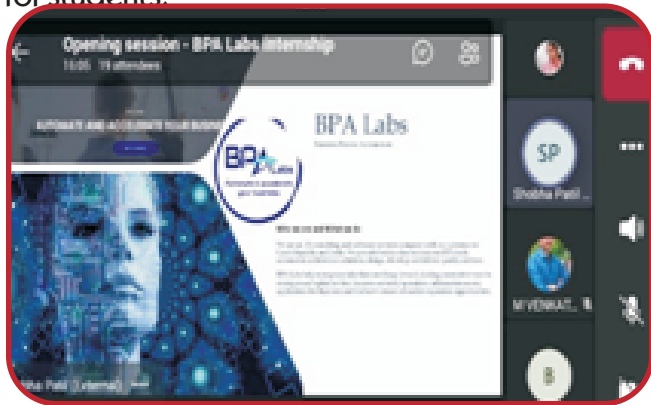

Dept. of IS&E, 6th Semester around 15 students had actively took part in AWS Cloud Beginner's Certification Program conducted by renowned online education platform Edureka and has achieved 'A' grade in their course completion examination.

INTERNSHIPS 2021-22

1. IoT Internship By ALS : The Department has conducted a session on “IoT Based Mini Project Development” as a part IoT Internship on 29th September, 2021 for final year students in association with ALS, Bengaluru. The Session was handled by Ravindra Moditaya, Consultant ALS Bengaluru & Chidambar Kulkarni, Assistant Manager ALS Bengaluru. About 20 Participants from IS&E Department has attended this session. This session is coordinated by Mr. Naveen RCM & Mr.Imran Khan.

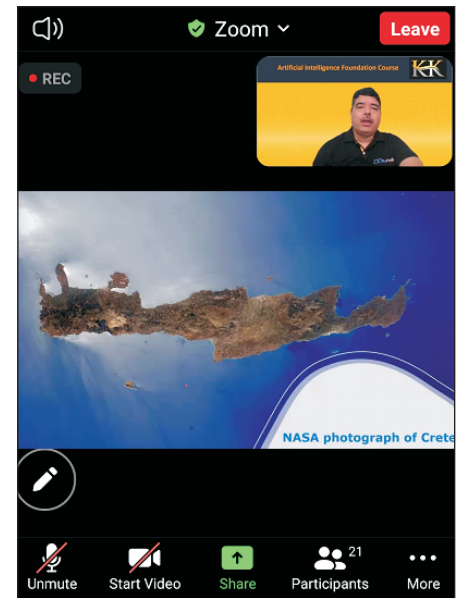

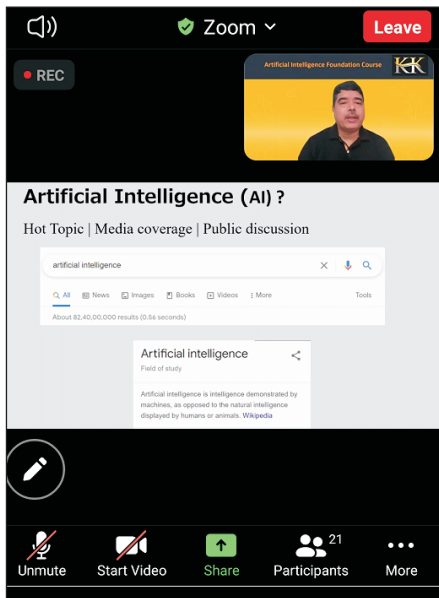

“YOU DON'T HAVE TO BE GREAT TO START,BUT YOU HAVE TO START TO BE GREAT” Internship is such life starting opportunities for students.

2. BPA Labs Internship:

a. Opening Session BPA Labs Internship:

The Opening Session BPA Labs Internship was handled by Mrs. Shobha Patil the session and taken introduction of all interns and gave certain tips on how to introduce at the last. The session conducted on 18th September,2021.

b. A session on “Artificial Intelligence Foundation Course” was conducted on 25th September,2021. The session was handled by Dr. Kamal K from IIT, Kharagpur.

c. Mrs.Shobha Patil and Ms.Leena handled the session on “AI & ML” and discussed about introduction to AI and ML and shown some websites and gave some real time examples of AI&ML. The session conducted on 21st September, 2021.

d. A session on “Machine Learning Foundation Course” was conducted on 26thSeptember, 2021. The session was handled by Dr. Kamal K from IIT, Kharagpur.

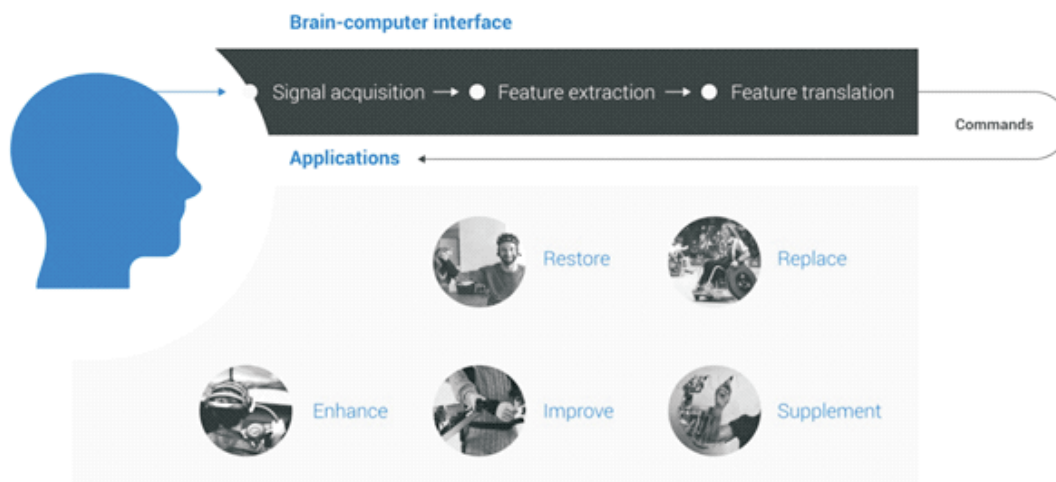

Article Section

Brain-computer interface:

A brain-computer interface, sometimes called a brain-machine interface, is a direct communication pathway between the brain's electrical activity and an external device, most commonly a computer or robotic limb. BCIs are often directed at researching, mapping, assisting, augmenting, or repairing human cognitive or sensory-motor functions.

The basic setup of a BCI system includes three components:

1. Specific electrodes to record electric, magnetic, or metabolic brain activity.
2. A processing pipeline to interpret those signals, extracting relevant features from them, decoding patterns of interest, and outputting commands.

There are a wide variety of devices that can be controlled using brain commands, and they can be used in five ways: to replace, restore, enhance, supplement or improve some human function.

Techniques to measure brain activity

The first component of BCI technology is a method to record the human brain signals. It could be considered the most relevant, since it determines aspects like the cost, the potential areas of application and the population that can use it. The activity of the brain can be measured with sensors implanted inside the body (invasive BCIs) or with external sensors (non-invasive BCIs)

1. Invasive recordings allow measuring the electrical activity of neural populations with very high temporal and spatial resolution, meaning that we can know very precisely when and where a certain pattern of neural activity occurred. However, they require very expensive equipment and a complex set-up that involves surgery, with non-negligible postsurgical potential risks associated. For this reason, most of the BCI research in this field has been conducted with animals, although the number of research laboratories in the world using implantable BCIs with humans (mostly patients with motor impairment) is growing.

2. Non-invasive sensors allow recording electric activity (with electroencephalography, EEG), magnetic activity (with magnetoencephalography, MEG), or metabolic activity (with functional near-infrared spectroscopy, fNIRS).

Why Artificial Intelligence is Must for Cybersecurity

With the rapid development of artificial intelligence (AI), there is no doubt that this technology is starting to have a profound impact on our lives. One of the most controversial topics surrounding AI is whether or not it will eventually lead to large-scale job losses.

There are certainly some jobs that AI is already starting to take over. For example, many retail stores are now using self-checkout kiosks instead of human cashiers. And there are many other examples of tasks that can now be performed by AI-powered software, such as customer service, data entry, and even legal research.

But what about the advantages of AI? How can artificial intelligence protect us from devastating cyber attacks? Some cybersecurity companies are already taking advantage of AI for good.

What is Cybersecurity?

Cybersecurity is the practice of protecting electronic information by mitigating information risks and vulnerabilities. Information risks can include unauthorized access, disclosure, interception, or destruction of data, etc. Data can include but is not limited to, the confidential information of businesses, banks, or individual users.

In cybersecurity, vulnerabilities are weaknesses in systems or devices that can be exploited by attackers to gain unauthorized access to data or servers. Common vulnerabilities include insecure software design, 0-days, configuration errors, and poor user management practices. Attackers can exploit these vulnerabilities to gain access to sensitive data or systems, often without the knowledge of the victim/target.

There are many different types of cybersecurity threats, including viruses, worms, Trojans, phishing attacks, ransomware, insiders, SQL injection attacks, denial-of-service attacks (DDoS attacks), etc.

What is artificial intelligence?

In computing, artificial intelligence (AI) is the ability of a machine to accurately simulate human intelligence. This means that AI computers can learn and understand complex tasks, make decisions, and carry out human-like actions.

While AI has been around for centuries in various forms, it has only recently become a staple in mainstream computing. This is due in part to the rapid advancement of technology, which has allowed AI to become more sophisticated and capable than ever before.

There are many different types of AI, each with its own strengths and weaknesses. Some of the most popular types of AI include machine learning, natural language processing, and computer vision.

Cybersecurity and Artificial Intelligence

When it comes to cybersecurity, artificial intelligence (AI) is increasingly being seen as a valuable tool. By automating the process of identifying and responding to threats, AI can help organizations improve their security posture and better protect their data.

In addition to threat detection, AI can also be used for incident response and forensics. By understanding the patterns of past attacks, AI can help analysts predict future attacks and take steps to prevent them. And by analyzing large amounts of data more quickly than humans could, AI can help investigators identify the root cause of an attack more rapidly.

Some additional use of AI in cybersecurity include the following:

1. Encrypted traffic analysis
2. Providing recommendations
3. Recognition of voice, language, and speech
4. Automation of software vulnerability search
5. Detection of fake photos and substituted pictures.
6. Detection of malicious code and malicious activity in corporate networks

Statistics on AI use in cybersecurity
Overall, AI provides a number of advantages for businesses, both in terms of cost savings and efficiency gains. As technology continues to evolve, we can expect even more innovative applications of AI in the business world.

As technology becomes more and more advanced, it's no surprise that cybersecurity and artificial intelligence are two of the most talked-about topics in the tech world. And for good reason – they're both incredibly important.

Conclusion

In conclusion, artificial intelligence is not a silver bullet for cybersecurity, but it can be a powerful addition to an organization's security arsenal. When used correctly, AI can help organizations improve their security posture and better protect their data.

Machine Learning Approaches to Classify Medications Based On Mechanisms

A crucial part of drug development is the mechanism of action. It can assist scientists in the drug discovery process. This research presents a machine learning approach for predicting a drug's mechanism of action. Binary Relevance K Nearest Neighbors (Type A and Type B), Multilabel K-Nearest Neighbors, and a proprietary neural network are the machine learning models employed in this paper. The mean column-wise log loss is used to evaluate these machine learning models. With a log loss of 0.01706, the custom neural network model had the best accuracy. The Flask framework is used to integrate this neural network model into a web application. A user can upload a custom testing features dataset that includes gene expression and cell viability. The top drug classes will be displayed on the online application, along with scatter plots for each medication.

Patent

Dr. Neelambike S published a Patent titled "**Apparatus and Method for Filling a pit**" in collaboration with the Civil Engineering Department.

This Patent invention provides an apparatus and method for filling a pit with concrete. The dimensions of the pit are found by image processing of images of the pit from at least two different points. The volume of the pit is computed and a robotic arm equipped with a concrete filling nozzle is controlled by a computer under supervision of an operator. Uniform filling of the required amount of concrete is achieved.

Book Publication

Insight of VANET

Dr. Neelambike S and Amith Shekhar C published a book titled "**Insight of VANET**" in Scholar Press, which has been translated into six languages: German, Spanish, French, Italian, Portuguese, and Russian on 26, January, 2022.
